DETAILED ACTION

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1,2 are rejected under 35 U.S.C. 103(a) as being unpatentable over JONES et al '96 and LOSEL et al '96 in view of JOHNSON et al GB2330076

JONES shows Beta acids known to be antifungal, antibiotic and acaricidal (page 165, 1) inclusive of spider mite repelling. JONES applied test samples of Beta acids to bean leaf (page 166, 2.2) and killed mites (page 167, 3.3). Soap was not used.

LOSEL shows aphids controlled by water spraying crops with Beta acids (page 294, 2.1), again, soap-less.

JOHNSON (page 4, lines 20-28) does show soap, not further defined in the instant claims, as TWEEN 80 as emulsifier in aqueous- (50% ethanol)- solutions. The compositions can be sprayed (claim 2, h) and are antibiotic to clostridium.

It would have been obvious to a person of ordinary skill in the art at the time the invention was made desiring to utilize natural compounds as pesticides, to use the Beta acids of Jones and Lozel, to control mites and aphids of crops using emulsified solutions as of JOHNSON, in order to provide a natural product one treatment means to control mites, Aphids, and bacteria with sprayable forms emulsified as shown by Johnson.

There is no distinguishing disclosure of the instant composition as providing an unusual and/or unexpected results obtained since the prior art is well aware of the use of hops and extracts thereof as pesticides.

The selection of the instant non-critical pest control ingredients and concentrations are result effective parameters chosen to obtain the desired effects. It would be obvious to vary the concentration each ingredient to optimize the effect desired and the use of ingredients for the functionality for which they are known to be used is not a basis for patentability.

Double Patenting

Art Unit: 1615

Claim 1, 2 are provisionally rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 3, 10, 14, 15, 17, 18 of copending Application No. 11/00878

Although the conflicting claims are not identical, they are not patentably distinct from each other because the methods, steps are the same, thus any pest on a plant would be affected..

This is a provisional obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. A nonstatutory obviousness-type double patenting rejection is appropriate where the conflicting claims are not identical, but at least one examined application claim is not patentably distinct from the reference claim(s) because the examined application claim is either anticipated by, or would have been obvious over, the reference claim(s). See, e.g., *In re Berg*, 140 F.3d 1428, 46 USPQ2d 1226 (Fed. Cir. 1998); *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) or 1.321(d) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent either is shown to be commonly owned with this application, or claims an invention made as a result of activities undertaken within the scope of a joint research agreement.

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).
